It is not possible to completely disable filesharing in TrustyFiles.
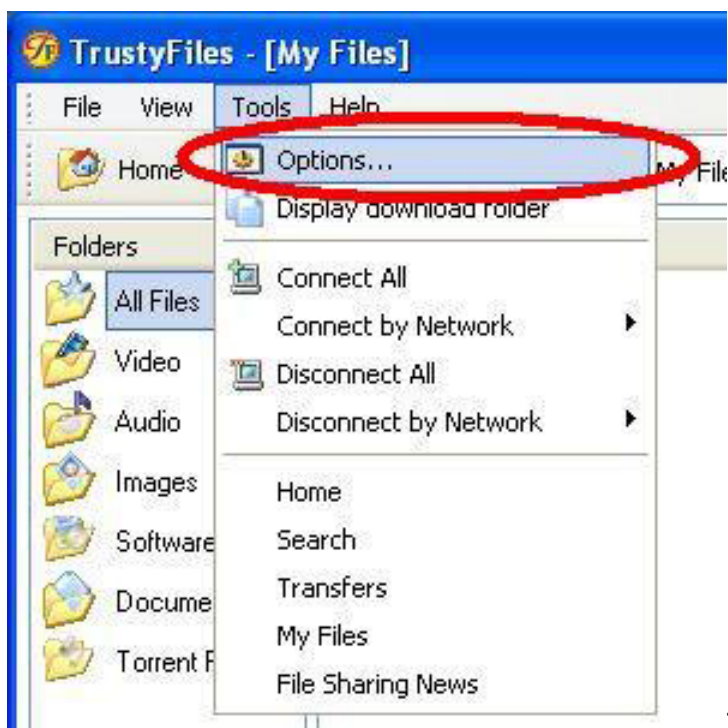

The downloads directory, **C:\Program Files\TrustyFiles\Downloads** by default, must be shared. To remain in compliance with the Responsible Use of the Southwest Network policy you must remove all copyrighted files from this directory and continue to remove new ones as soon as they are downloaded.
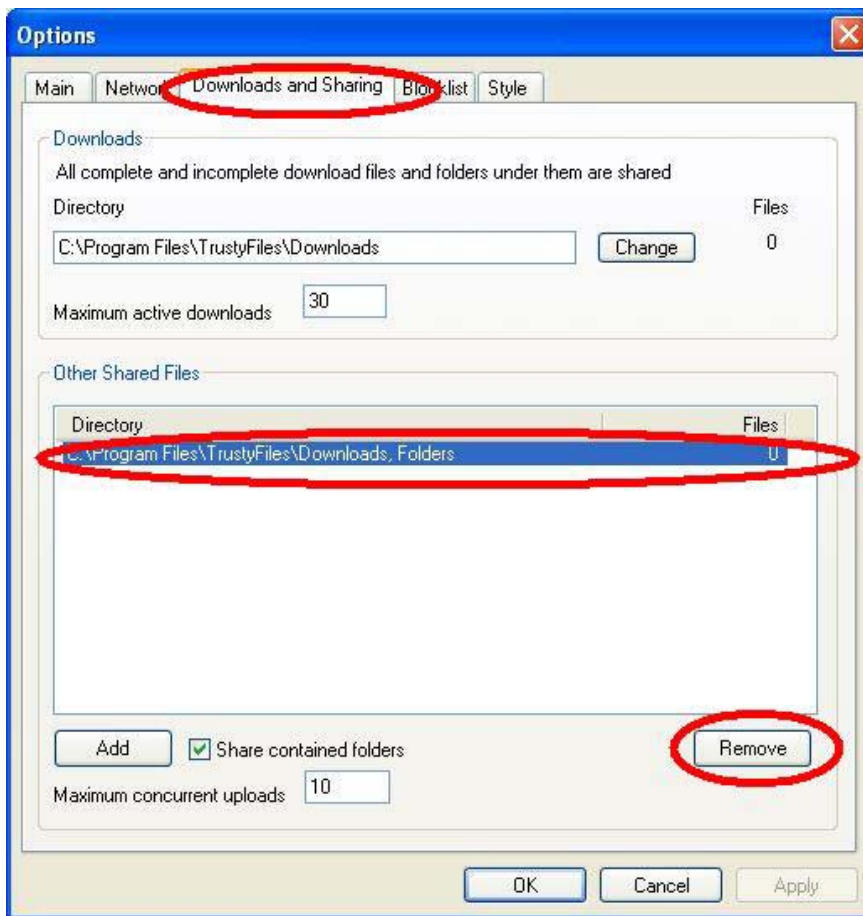

To remove other shared folders follow the instructions below.

1. Select **Options...** from the **Tools** menu.

Tools Menu

2. Select the **Downloads and Sharing** tab. Select all of the shared directories from the list and click **Remove**.

Downloads and Sharing

3. Note that you cannot unshare the **Downloads** directory. Remove all files from it.
